PresSure

A Handheld Device for At-Home Breast Health Monitoring

Team: Jaiti Swami, Natasha Kodgi and Rutuja Shendage | Advisor: Dr. Alexander Adams, Dr. Chris Hermann

BACKGROUND

High-risk women 30+ lack consistent between-visit screening. However, **early detection offers a 90% survival rate** - highlighting the need to overcome key barriers.

PROBLEM

Inconsistent self-exams

Missed subtle lumps

Delayed Care

MARKET

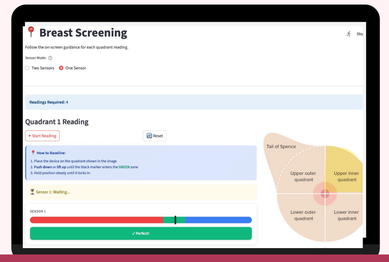
TAM: $1.5B

SAM: $200M

37.5M

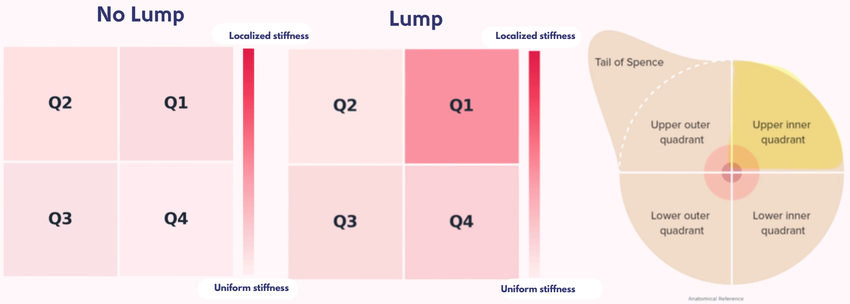
high-risk U.S. women (age 30+, dense tissue, genetic risk)

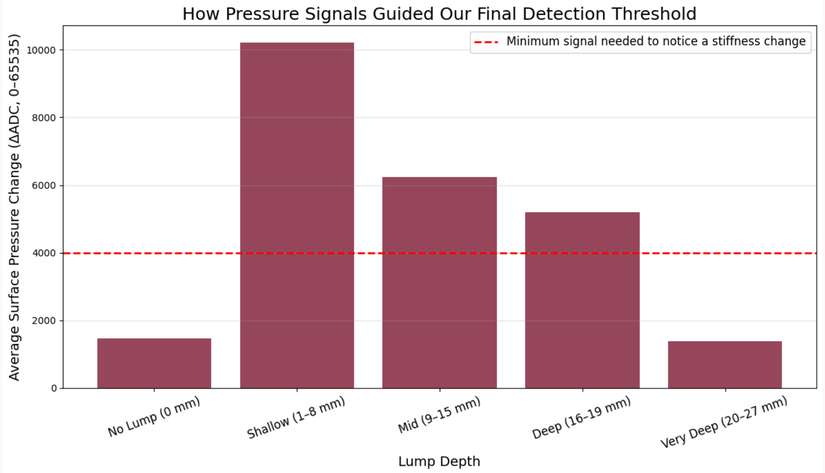
Our Solution: A Guided At-Home Breast Monitoring Device



Risk Assess with Fit Finder → **Controlled Compression** → **Sensing & Detection** → **Automatic Data Logging**

ENGINEERING ANALYSIS





Phantoms → Highly Repeatable, 6% CV
Detects ~1 cm lumps up to 1.8 cm below the surface

VALUE PROPOSITION

- Low-cost at-home screening
- Guided workflow
- Real-time sensing & detection
- Supports earlier follow-up
